

WILUBE CHEMICAL INC.

Wilube Oil Wiping Systems

Wilube Chemical Inc., a technology leader for more than 50 years, now offers the **coil manufacturing industry's most advanced lubricant wiper system** for Aluminum Fin Presses.

coil manufacturing industry's most advanced lubricant wiper system for Aluminum Fin Presses.

Unique two-side wiping cuts oil use by 40%

- Wilube/CFB have designed a wiper system which attaches to the lubricant tanks on various styles of aluminum fin presses.
- Our patent pending wiper is a heavy duty adjustable system which is mounted inside the dip tank behind the pinch rollers.
- The main feature of our system controls the amount of lubricant on both sides of the fin stock (top and bottom) going into the piercing dies.

The Wilube Advantage:

- Cuts oil use by approximately 40%.
- The aluminum fines from the fin stock are contained in the dip tank achieving cleaner dies and longer preventive maintenance intervals.
- Brazing operations will have less smoke and cleaner coils going to leak detection.
- Over all the coils are more efficient in the field and the wettability is superior when used with Wilube's new generation synthetic fin lubricants. (Non VOC products)
- The manufacturing facilities are cleaner, i.e. no oil on the manufacturing floors, cleaner lacing operations, safer conditions in your work place.
